

Claims

1. A method for producing a liquor from sea urchin eggs comprises the steps of sorting out the sea urchin eggs, flooding them by an alcohol-water mixture with further infusing at definite temperature and settling at fallen temperature, wherein the sorting includes washing out by water having temperature up to 20°C, the flooding and the infusing are carried out by the alcohol-water mixture having from 28% to 40% vol. of alcohol at a volume ratio from 1:8 to 1:25 respectively at temperature from 25° to 35°C for from 1 to 4 days, and the settling is carried out at temperature up to 10° till clarification of the mixture.
2. The method of claim 1, wherein the washing is carried out by sea water.
3. The method of claim 1, wherein both the infusing and the settling are carried out in a dark place.
4. The method of claim 1, wherein the settling of the mixture is carried out together with the sea urchin eggs.
5. The method of claim 1, wherein the mixture is filtered after the infusing.
